## Filling/Capping Monoblocs

### EXACTA-RC

Special version for corrosive products.  
This series is available with either  
magnetic or mass flowmeters.

- All the parts in contact with the product are made of PVC and Titanium.
- Machine base is completely covered with PVC as well as all the cladding of filling and capping sections.

### Series-RC

For the filling of corrosive products, EXACTA lines are available in "RC" version.

Among the most common uses of the "EXACTA/RC" lines, there are the filling of bleach and liquid detergents for toilet cleaning.

The machines can also handle bottles with inclined neck, with application of undercap and screw-on cap.
