EXACTA-RM

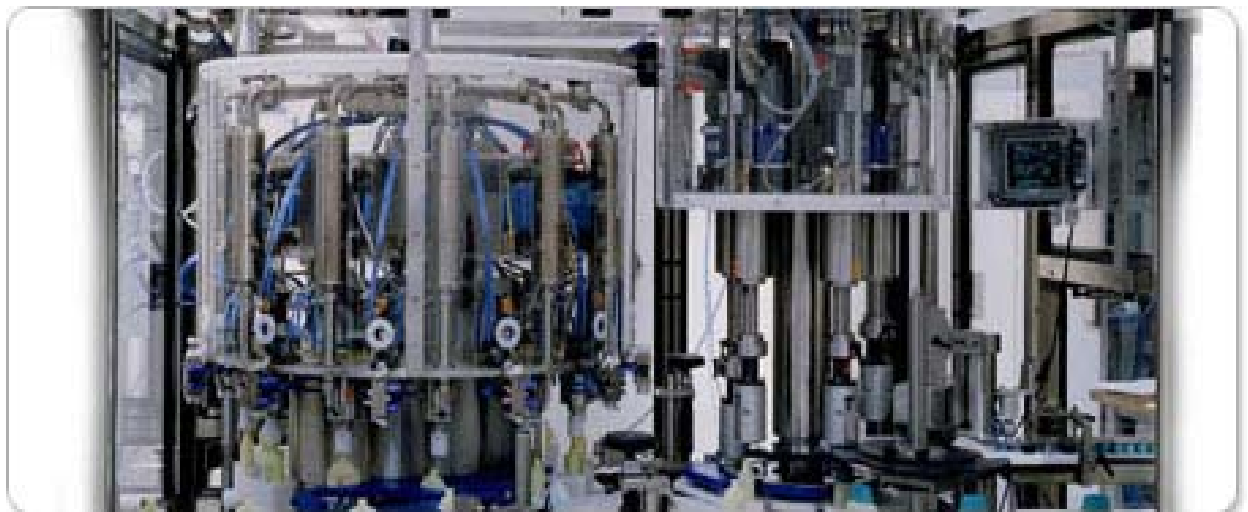

With mass flowmeters designed to handle products without conductivity and for applications where weight measurement of the products is required.

The PROMASS type flowmeters are employed to assure precision dosing with maximum tolerance of $\pm 0.2\%$. The working principle of the mass flowmeters is based on the controlled generation of the Coriolis forces. This measuring procedure responds particularly well to the needs of pharmaceutical, food and cosmetic industries.

Series-RM

When the product is to be measured by weight, or for the processing of non-conductive products, "EXACTA" machines are equipped with mass flowmeters. These devices guarantee high filling accuracy and do not require maintenance.
