ROTOBOT

## Bottle Orientors

**DTM**

Packaging/Bottling Machinery  
and Engineering Services

### ROTOBOT

The ROTOBOT series is a rotary style continuous motion bottle orientor. The orienting system detects the bottle position (front or back) and then rotates the bottle to the correct position prior to transfer on to a discharge conveyor.

### ROTOBOT

Suitable for orienting bottles with off-center necks and/or handles; pre-decorated and pre-labelled bottles; relief printing and other orientation challenges before conveying them to the filling process.

The detecting systems read the differences, even minimal, in bottle shape, color, bar code or any other identifying characteristics on the bottles.

The detecting signal is transmitted to the supporting plate of the bottle to be oriented. It activates a pneumatic actuator which produces a 180° rotation of the bottle on its vertical axis.
