(Pre-owned) PNEUMATIC SCALE 20 HEAD SERIES B PRESSURE FILLER

Packaging/Bottling Machinery
and Engineering Services

PSC 20 Head B Frame Pressure Filler

In operation, the container enters the machine and is located on an elevator plate, which lifts it to the proper height. With the filling nozzle extended into the mouth, the flow of liquid starts. The product flows from ports to allow streams to run outward from the nozzle and down the inner surface of the container. This reduces foam causing turbulence to a negligible degree. When the liquid reaches the pre-arranged level, the product flows into the overflow system. When the elevator plate drops, the nozzle closes, shutting off the flow of product.

Features:

Directional sliding nozzles provide positive fill level control.

Positive Control Neck Guide System

Stainless Steel On/Off Primed Overflow

Stainless Steel clad lower turret

- Safeties
- * Main Drive Overload and Disconnect
 - * Intake and Discharge Starwheel
 - * Low Air Pressure Shutdown
 - * Infeed Helix Drive

Stainless Steel Barrier Guarding with Interlocked Lexan Access Doors as an add on

Complete set of Quick Change core components, involving two star adapters, one center guide adapter & Quick change helix mounting is an available option
